TITLE: Effect of weak cold stimuli on the body's heat-regulating mechanism

SOURCE: Gigiyena i sanitariya, no. 10, 1964, 31-37

TOPIC TAGS: experiment animal, medical experiment, hyman physiology, nervous system, heat biologic effect

Abstract: Effect of 0°C temperature on the body's heat regulating ability was experimentally studied on seven sportsmen in the 20-25-year age group. The subjects were kept for 30 minutes at normal room temperature, then were exposed for one hour to 0°C and 50-60% relative humidity with air motion of 0.1 meter/second, then again to normal conditions for 30 minutes. Observations were made every 60 minutes.

An inadequate reaction of the whole thermoregulating system was observed. The number of cold receptors decreased markedly, the oxygen consumption was reduced, the skin and body temperatures fell, the pulse rate diminished by 9-12 beats per minute. All the observed shifts persisted even after one hour at normal temperature following exposure to

cold.

The observed effect is explained by an inhibition in the central nervous system whose action is enhanced by the inability of weak cold stimuli to bring on "sub-threshold stimuli." It is suggested that this is an important factor predisposing a person to the common cold.

Among the factors which have retarded these efforts are mismanagement and inferior quality products. In 1956 alone, losses due to the above causes amounted to about 5 billion rubles. During the first six months of 1957, agencies of the Gosudarsvennyy arbitrazh (State Arbitration) alone reviewed 35,000 claims regarding poor quality and defective products to the amount of 498 million rubles. No personalities are mentioned and there are no references.

TITLE: Icing indicator. Class 62, No. 171271

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 10, 1965, 116-117

TOPIC TAGS: icing indicator, aircraft wing icing, icing, icing sensor, particle counter

ABSTRACT: An Author Certificate has been issued for an icing indicator to be mounted on the leading edges of aircraft. A radiation source is used as the sensing element of the icing sensor. A narrow beam of radiation is reflected from a screen mounted on the wing's leading edge; this beam splits and passes to two radioactive-particle counters positioned in diagonal to a balanced bridge which unbalances when the unheated portion of the screen is coated with a layer of ice. To provide favorable indicator-operating conditions, an electric heating element is mounted on one-half of the screen, thus preventing the possibility of icing (see Fig. 1 of the Enclosure). TITLE: Effect of weak cold stimuli (subnormal temperatures) on human thermoregulation

SOURCE: Gigiyena i sanitariya, no. 7, 1966, 23-29

TOPIC TAGS: hypothermia, hypothermia biologic effect, human physiology, human thermoregulation, BODY TEMPERATURE, TEMPERATURE ADAPTATION, PHYSIOLOGIC PARAMETER, BIOLOGIC ECOLOGY

ABSTRACT: Three series of experiments were conducted in a meteorological chamber at 0C, 5C, and 8C with 50—60% humidity and 0.1—0.2 m/sec air current. The purpose of these tests was to determine the effect of cold on human thermoregulation. Six or seven healthy subjects aged 20—26 were used in each series. They were dressed in ordinary clothing and remained in a resting position in the chamber until their removal and observation for an hour at 20—23C. Every half hour, the subjects were examined for: 1) cold receptor mobility; 2) cold sensitivity (8C); 3) oxygen consumption; 4) skin temperature in different areas; 5) pulse rate; 6) arterial pressure; and 7) CNS reaction. Each test series lasted 50—60 days and a total of 650 observations were

TITLE: Testing New Tubes With the "IL-14" Device (Ispytaniye novykh lamp priborom "IL-14")

PERIODICAL: Radio, 1958, Nr 6, pp 52-55 (USSR)

ABSTRACT: The article contains instructions for qualified radio amateurs, who are familiar with the "IL-14" tube tester, concerning the use of this device for checking tube types which are presently produced by Soviet industry. The "IL-14" tube testers found wide-spread application in radio amateur clubs, but their sets of perforated cards used for checking tubes do not include the modern types. The article is accompanied by a table in which the characteristics of various tubes are listed. The instructions were worked out by order of the periodical "Radio".
There are seven diagrams and one table.

AUTHORS: Kasparov, N. Kh. and Dmitriyev, E. A. SOV/94-58-8-19/22

TITLE: Locating Short-Circuits to Ground in Circuits With Neutral Disconnected (Obotyskanii zamykaniy na zemlyu v setyakh s izolirovannoy neytral'yu)

PERIODICAL: Promyshlennaya Energetika, 1958, Nr 8, pp 38-39 (USSR)

ABSTRACT: This is a contribution to discussion on an article of the same title by Ye. F. Tsapenko, published in Promyshlennaya Energetika, 1957, Nr 7. In order to facilitate location of faults at the author's works cable transformers have been made up of steel from defective current transformers and installed on all outgoing cables near the busbars. The secondary terminals of these transformers are connected as shown in the diagram, one end of each winding being connected to a common point and the other ends being brought out to terminals. Arrangements are made to create an artificial earth on healthy phases when a fault occurs, and the defective cable is found by making connection in turn to each of the terminals connected to the cable transformers until a signal lamp lights. A
